

Alex B. Criswell
Graduate Candidate, M.A. & M.S. Ed.
Purdue University Calumet

Reaching student communication and learning needs through web accessibility

Welcome!

- This presentation will examine web accessibility and how it relates to the learning and communication needs of students in a technology-driven society.
- Web accessibility information, examples of compliant and non-compliant content, as well as accessibility tools will be provided.

What is a disability?

- Short Versions:
 - A limitation (Riesmeyer, 2013).
 - The outcome of the interaction between a person with an impairment and the environment and attitudinal barriers she/he may face (WHO, 2013).
- Major categories (W3C, 2013):
 - Motor
 - Cognitive
 - Visual
 - Auditory

Major Life Activities

- Seeing
- Hearing
- Eating
- Sleeping
- Walking
- Standing
- Lifting
- Bending
- Speaking
- Breathing
- Learning
- Reading
- Thinking
- Communicating
- Working
- Interacting with others

Reasonable Accommodations

- An adjustment or auxiliary aid
 - No fundamental alteration in the function of a program or service
 - Does not impose an undue financial or administrative burden to the institution/organization.

You're not alone.

- It is not just about a disability.
- Accessibility relates to different...(Riesmeyer, 2013)
 - Abilities
 - Devices
 - Situations

World Wide Web/Internet

- How is it used?
 - News
 - E-mail
 - Shopping
 - Entertainment
 - Education
 - Communication
- Does everyone use/access/view the Internet the same way?

What is web accessibility?

- Web Accessibility refers to the regulations regarding accessible content on the World Wide Web.
- “The power of the web is in its universality. Access by everyone regardless of disability is an essential aspect.” – Tim Berners-Lee (W3C, 1997)

Origin of Web Accessibility

- In the United States, applicable laws include:
 - ADA-Americans with Disabilities Act (1990)
 - IDEA-Individuals with Disabilities Education Act (1997)
 - Rehabilitation Act (1973)
 - Section 504 & 508
- Web Accessibility is centered around:
 - WCAG- Web Content Accessibility Guidelines
 - W3C (World Wide Web Consortium)
 - Section 508
 - Rehabilitation Act of 1973

Assistive Technology

- Assistive Technology has primarily been used by individuals with disabilities, which includes examples such as:
 - Alternative input devices
 - High contrast features available on computers and mobile devices
 - On-screen keyboards
 - Screen readers such as JAWS and Orca
 - Text enlargers
 - Transcriptions
 - Voice recognition software such as Dragon Naturally Speaking

Screen Reader Example

- Neal Ewers
- Trace Institute
 - University of Wisconsin
- Use of a screen reader/speech synthesizer
- <http://www.youtube.com/watch?v=VvWCnFjAGgo>

Where do I begin?

- Review the literature
 - Regulations
 - Section 508
 - WCAG (2.0)
 - Recommendations
 - Reviews & Tips on Web Accessibility
- Build it!
- Website/Document
- Test your product
 - Accessibility Checkers
- Revise & Distribute

What rules should I follow?

SECTION 508

- Non-text elements
- Multimedia
- Color
- Styles
- Image Maps (outdated)
- Data Tables
- Frames
- Flicker
- NoScript (outdated)
- Links to plugins
- Skip Navigation
- Redirects

WCAG 2.0

- Principle 1: Perceivable
 - "Information and user interface components must be presentable to users in ways they can perceive."
- Principle 2: Operable
 - "User interface components and navigation must be operable."
- Principle 3: Understandable
 - "Content and controls must be understandable."
- Principle 4: Robust
 - "Content must be robust enough that it can be interpreted reliably by a wide variety of user agents, including assistive technologies."

Quick Tips

- Use relative font sizes on web pages/documents
 - Headings: H1, H2, H3, H4
 - Paragraph
 - Try to avoid **Bold** text for headers, use the H settings instead
- Web Links
 - Links are always underlined.
 - Do not underline normal text unless it is a link.
 - Use meaningful names
 - “Click Here” isn’t a meaningful link

Quick Tips

- Alternative Text (ALT Text)
 - Required for all graphics and objects
 - Be descriptive, yet concise
 - Unacceptable ALT: A cute dog
 - Acceptable ALT: A small, ten-pound dog with brown, white, and black markings and is of the Pomeranian and Papillon breeds

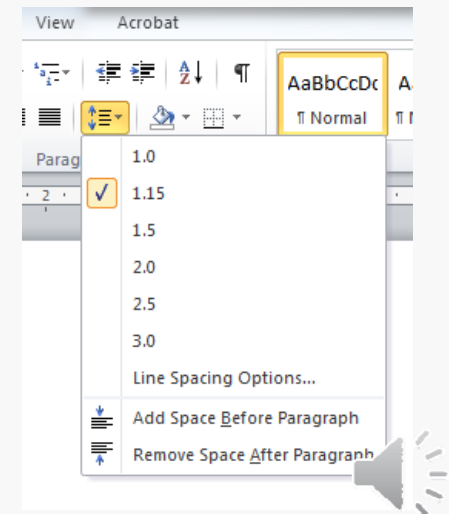

Quick Tips

- Documents
 - Utilize styles in documents

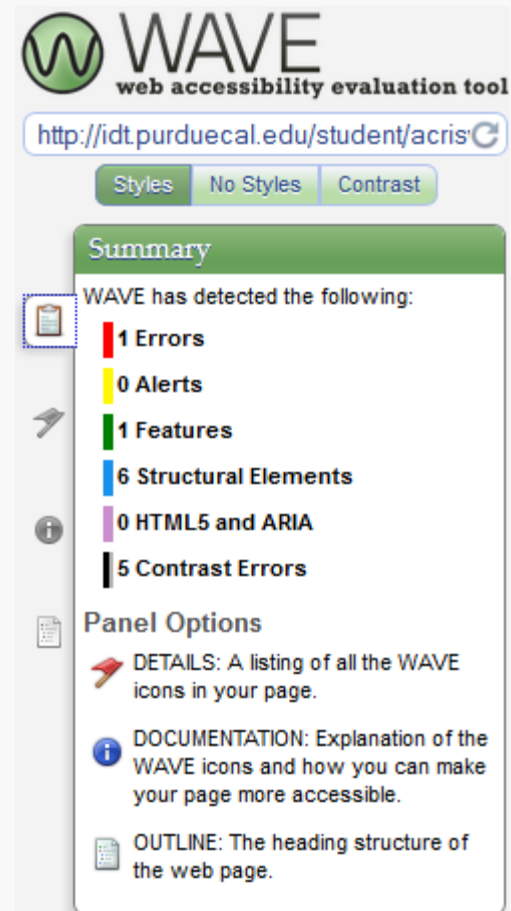

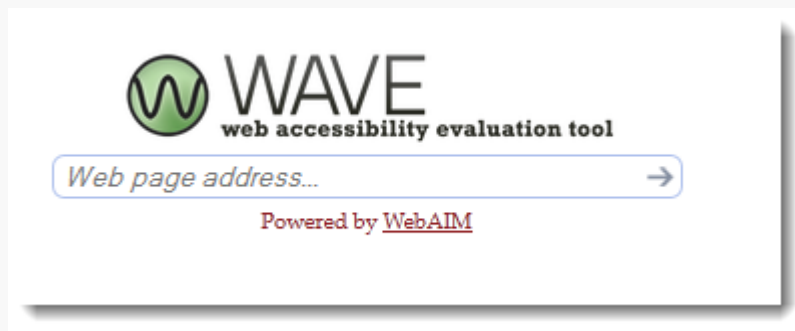

- Paragraph Spacing
 - Refrain from hitting "enter" for spaces

Testing

- WAVE (WebAIM): <http://wave.webaim.org/>
- Things to look for:
 - Errors
 - Alerts (Case-by-case)
 - Color Contrast

The image shows the WAVE tool results for the URL <http://idt.purduecal.edu/student/acris>. The tool has detected the following:

- 1 Errors
- 0 Alerts
- 1 Features
- 6 Structural Elements
- 0 HTML5 and ARIA
- 5 Contrast Errors

Panel Options:

- DETAILS: A listing of all the WAVE icons in your page.
- DOCUMENTATION: Explanation of the WAVE icons and how you can make your page more accessible.
- OUTLINE: The heading structure of the web page.

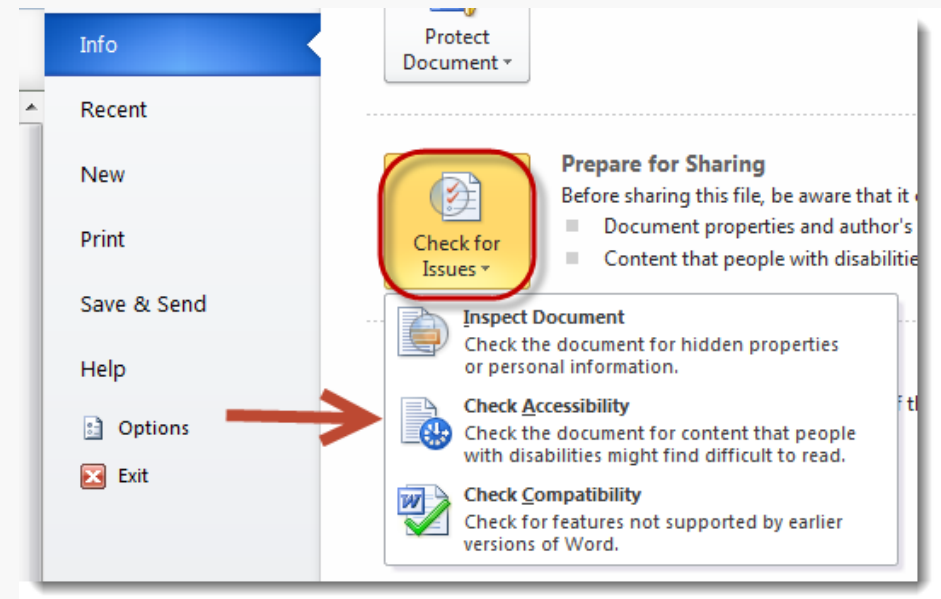

Testing

- Document Accessibility Checker

- Look for:

- Heading text
- Alt tags
- Reading Order

Accessibility & User Experience

- Let's review...
 - A disability
 - Major life activity
 - Accessibility
 - Section 508 & WCAG
 - Assistive Technology
 - Specialized technology & software
 - Accessibility checkers

How would you know?

- Websites
- Let's check! (WAVE)
 - Example A
 - Example B

How would you know?

- Documents
- Example A:
 - Document
- Example B:
 - Document

Assistive Software Example

- Software: Dragon Naturally Speaking 12
 - Nuance, Incorporated.
- User: Full-time graduate student
- Demonstration link available on website.

Behind those eyes...

- Someone with a disability:
 - Attention Deficit Hyperactive Disorder
 - Visual & Hands on Learner
 - Closed Captioning:
 - Auditory Processing Delay
 - Hearing Loss
 - Carpal Tunnel
 - Dragon Naturally Speaking 12

Accessibility & You

- Where would be we in society without accessibility or assistive technology?
- We all can benefit from accessibility and assistive technology.
- Adopting Accessibility into your curriculum is easy.

Thank You!
